OTHER INSPEC SERVICES

SDI

(Selective Dissemination of Information.) This is a service individually tailored to the requirements and interests of the engineer or research worker. Details of information relevant to the interest profile of the individual subscriber are selected from the data being processed for the INSPEC Database. Information is dispatched weekly on 150 mm ×100 mm (6″ × 4″) cards.

TOPICS

This is an SDI service based on standard profiles. There are over 90 subjects covering high-activity areas of research and development. This is an inexpensive card service designed to alert engineers and researchers to the availability of literature within their subject area.

MAGNETIC TAPES

Tapes containing all the information included in the INSPEC publications are issued twice monthly. They enable the larger research and development organisations to produce their own internal information and current-awareness services.

JAPAN UPDATE

Six high-technology subjects are covered by Japan Update Services. Abstracts are provided for articles selected from about 300 Japanese journals and despatched weekly on conveniently-sized cards. This inexpensive service is designed to help engineers stay abreast of technological developments reported in the Japanese literature.

PROPERTIES OF Amorphous Silicon

Contents include

- Microstructure
- Hydrogen in amorphous silicon
- Spin density
- Infra-red absorption spectra
- Density of localised states
- Conductivity
- Mobility and diffusion length
- Optical absorption spectra
- Optical energy gap
- Photoluminescence spectra
- Photoluminescence intensity
- Photoconductivity

This new publication brings together, from a wide range of sources, the essential data on the structure, electronic states and properties (electrical and optical) of amorphous silicon. Leading experts have co-operated in the evaluation of the data. Prominent among these is Dr Marc H Brodsky of IBM, Yorktown Heights who has also written the introduction.

The handbook is an invaluable aid for all those engaged in research on amorphous silicon or developing new devices based on this important material.

Properties of Amorphous Silicon, casebound, 262pp, 280 x 210mm, is priced at £85 UK $195 USA and £110 elsewhere. To order your copy, contact:-
